EDUCATION

University of California, San Diego (UCSD)
B.S. in Computer Science | Cumulative GPA: 3.67

San Diego, CA
Expected Graduation: June 2028

SKILLS

Languages: Python, C++, TypeScript, JavaScript, Java

Data Curation: multimodal labeling, rollout curation, VLM verification, behavioral cloning, LeRobot / Open X-Embodiment export

Embodied AI: reinforcement learning (PPO, MAPPO), sim-to-real, MediaPipe pose, vision-language pipelines, Google Cloud Run

Robotics + Infra: ROS 2, SLAM, visual odometry, Docker, FastAPI, WebSockets, multi-service data pipelines

EXPERIENCE

Undergraduate Research Assistant — AI for Circuit Invention, UCSD

San Diego, CA

Research Assistant (with Prof. Prasad Gudem & Samvid AI)

March 2026 – Present

- Curated and labeled multimodal design samples (netlists, simulation logs, performance metrics), turning raw Cadence tool output into clean supervision signals for model fine-tuning.
- Integrated LLM APIs with simulation tools in a closed-loop generate-evaluate-feedback workflow over a large multimodal search space.

Desktop Agent Developer & Founder — UCSD Agent Development (Clue2)

San Diego, CA

Mentored by Prof. Ramamohan Paturi

Jan 2025 – Present

- Captured session metadata and real-time meeting transcripts across 7+ integrated services, producing structured training traces from live user workflows at 40+ beta users.

Lead Researcher — Brain-Computer Interface (Stanford Lee-Messer Lab)

Stanford, CA

Stanford University School of Medicine

Oct 2023 – Dec 2024

- Collected, labeled, and benchmarked multimodal EEG datasets on a P300 paradigm; piloted with 12 users and shipped a React Native frontend turning raw neural signals into labeled, evaluation-ready control output.

ROBOTICS & DATA PROJECTS

DroneOS

1st Overall, Bow Capital × DS3 × SIC Hackathon (UCSD)

2026

- Trained swarm policies (MAPPO, behavioral cloning) over large simulated multimodal rollouts; curated vision data through YOLOX + Norfair fused with SLAM and 3D Gaussian Splatting maps.

Motion — Crowdsourced Robot Training Data Marketplace

Stanford × DeepMind Hackathon

2026

- Built an egocentric pipeline where contributors record industrial manipulation clips via phone with live MediaPipe skeleton overlay and instant pose-confidence scoring.
- Designed a Gemma 4 + Kimi K2 VLM verification stack on Google Cloud Run; exported LeRobot / Open X-Embodiment bundles with quality scores and price-tier metadata.

Battle Angel — Simulation Data Generation

Google Gemini 3.5 Hackathon

2026

- Curated rollout data across eight MuJoCo environments via PPO + FastAPI with GIF replay and Gemini-generated scene layouts.

Apollo Labs — RL Training Orchestrator

1st Overall, Eragon × Nozomio × AgentMail OpenClaw Hackathon

May 2026

- Built a PPO orchestrator with RunReports (metrics, rollout GIFs, versioned artifacts) synced to email, Nia memory, and MCP agent tooling.
